

**Table 1.** Isotopic compositions and  $^{14}\text{C}$  ages of sedimentary rocks, hydrothermal deposits, and vent fluids at the Atlantis Massif. Depths are reported as meters below sea level.  $\delta^{13}\text{C}$  and  $\delta^{18}\text{O}$  values of the carbonate material are in ‰ relative to the Vienna Pee Dee Belemnite standard;  $\delta^{18}\text{O}$  values of the vent fluid are relative to the Vienna Standard Mean Ocean Water standard (12). AMS  $^{14}\text{C}$  ages are conventional radiocarbon ages, uncorrected for reservoir ages. Mineral abbreviations: cc, calcite; arag, aragonite; bru, brucite;  $T$ , temperature.
